

BAHRIAH BT KAMARDI SUHAILI,
+60127739521, bahriahkamardi@gmail.com

Summary

Fresh Software Engineering graduate with hands-on experience in full-stack and AI-powered application development. Built and deployed real-time systems using FastAPI, React Native, and LLM technologies such as Gemini AI and Whisper. Experienced in developing scalable APIs, integrating machine learning models, and delivering end-to-end software solutions.

Education

Bachelor of Software Engineering with Honours, Universiti Malaysia Sarawak (UNIMAS)	Oct 2022 – June 2026 CGPA : 3.46
Foundation in Science, Universiti Teknologi MARA (UITM Dengkil)	CGPA : 3.44
Malaysian University English Test (MUET) Sijil Pelajaran Malaysia (SPM) 2020	Band 4 RESULT : 6A 3B

Skills

Languages	: Python, JavaScript, Dart, SQL
Frameworks	: FastAPI, React Native Expo, Laravel
AI/ML	: Gemini AI (LLM), Faster-Whisper
Tools	: Firebase, Git, PyInstaller, Inno Setup
Others	: Figma, OBS Studio

Participation

Internship Software Developer – Cat Tech Enterprise

March 2025– September 2025 (6 months)

- Developed frontend components for mobile applications using React Native Expo, improving UI responsiveness and usability.
- Performed debugging and maintenance of IoT-based agriculture monitoring systems involving Raspberry Pi, ESP8266, Arduino-based devices, and various environmental sensors.
- Debugged sensor-related issues including water level sensors and acidity/pH sensors using Arduino IDE and Serial Monitor to monitor device output, identify errors, and validate sensor readings.
- Troubleshoot IoT communication issues using MQTT protocol, verifying message transmission, device connectivity, and data communication between ESP8266 devices, Raspberry Pi gateway, and backend systems.
- Diagnosed network connectivity problems by checking IP configurations, device accessibility, WiFi connections, and communication status between IoT components.
- Maintained the Raspberry Pi-based IoT gateway system by performing system refreshes, cache clearing, and troubleshooting processes to ensure stable operation of connected devices.
- Debugged and maintained Laravel-based web applications, resolving functional issues and improving system reliability.

Mobile AI Workshop - Sarawak Skills

July 2024 – September 2024 (3 months)

Participated in a hands-on Mobile AI workshop focused on building AI-powered mobile applications using Android Studio and Kotlin. Gained practical experience in integrating AI/ML models into Android apps using Kotlin Framework and developing intuitive user interfaces (UI) following Material Design guidelines.

Projects

Medical AI Chatbot (Mobile Application)

React Native (Expo), FastAPI, Python, Gemini API, Firebase, Google Cloud, Render

- Developed a full-stack mobile application with React Native (Expo) frontend and FastAPI backend providing RESTful API services
- Integrated Gemini API (LLM) for intelligent symptom analysis and conversational patient responses
- Implemented symptom-to-condition retrieval using preprocessed JSON datasets for accurate diagnostic suggestions
- Designed and deployed backend services on Google Cloud and Render for scalable access

-
- Integrated Firebase for real-time database storage and synchronization
 - Designed a scalable backend API handling multiple concurrent user requests
 - Improved response accuracy through structured symptom-to-condition mapping
 - Enabled real-time chatbot interaction using LLM integration

Real-Time Speech Translator (Desktop App)

Python, PySide6, Faster-Whisper, PyInstaller, Inno Setup

- Built a real-time speech translation desktop application with live transcription and multilingual translation
- Implemented offline speech recognition using Faster-Whisper with locally bundled models
- Integrated real-time translation pipeline (supports online APIs / extensible to offline models)
- Developed a GUI using PySide6 with real-time audio capture and subtitle-style overlay
- Packaged the application into a standalone Windows executable using PyInstaller
- Created a professional installer using Inno Setup for easy end-user distribution
- Optimized inference performance for real-time processing on local machines
